MILLIONS OF DOLLARS

# PERCENTAGE DISTRIBUTION OF FAMILIES BY INCOME GROUPS 1951

## PERCENTAGE DISTRIBUTION OF WAGE EARNING FAMILIES BY INCOME GROUPS AND BY SIZE OF FAMILY, 1951.

## *Distribution of Non-Farm Incomes in Canada, by Size, in 1951*

A recent D.B.S. publication (Reference Paper No. 52) presents some interesting new data on the distribution of family and individual incomes in Canada. Total cash income of non-farm families for the year 1951 is shown as \$11.5 billion. This was distributed among 3.6 million non-farm family units, with the average income for each family unit being \$3,185. (This figure includes unattached individuals). If unattached individuals are excluded, the average was \$3,535.

In 1951 approximately one-half of all families received between \$1,500 and \$4,000, about one-quarter fell below this income group, while the remaining quarter had incomes in excess of \$4,000. Families in the lower income groups

consisted largely of single persons living apart from relatives and of two-person families. Many of these were young and only recently employed, while others were elderly people (over 65), many living in retirement or semi-retirement.

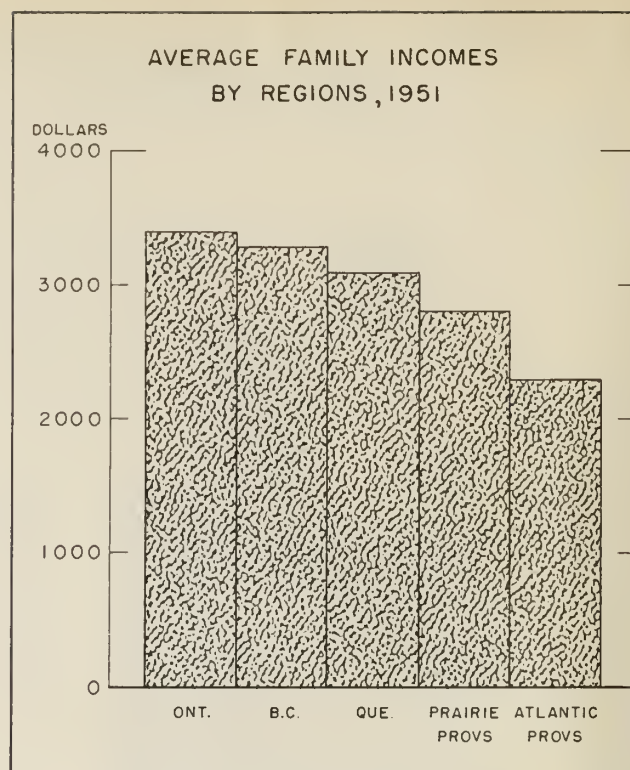

The average amount received by families differed considerably with the age of the head of the family. Thus, families headed by a person between 40 and 64 years old had relatively higher incomes than those with a younger or older head. When there was a man at the head whose age was 40 – 49, the average family income was \$4,000; if his age was 50 – 64 years, the family income on average was lower, though it was still second highest for all age groups, being about \$3,700. When there was a

female head of the family, the income for each age group tended to be lower. The same difference by sex is apparent in individual incomes where for each age group incomes of women were consistently lower.

The tables also indicate regional differences in family incomes. Ontario had the highest average family income in 1951 (of approximately \$3,400), and also had the smallest percentage of families in the lowest income group. British Columbia had the second highest average family income (\$3,286), followed by Quebec (\$3,098), the Prairie Provinces (\$2,809), and the Atlantic Provinces (\$2,293). The tables show that, for all regions, family incomes on average appeared to be higher in the metropolitan areas (cities with a population of 30,000 or more) than in smaller centres.

The accompanying charts illustrate these and other findings of the income size distribution study.

The estimates in the reference paper are based upon income data collected from a sample survey of 5,600 non-farm families. In addition to

giving data on family income, the reference paper also gives breakdowns of individual incomes in much the same detail as for families.

Note.— Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup> Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup> Exclusive of stillbirths. <sup>(3)</sup> Not applicable to figures on population.

<sup>(4)</sup> Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

Source: Monthly Report of Vital Statistics, D.B.S. and Department of Citizenship and Immigration.

<sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and no seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949. Annual data for 1952 are quarterly averages. Source: Labour Force Bulletin, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39 = 100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices except for wheat for which initial prices plus a ten-cent interim payment are used. Since August 1954, only initial prices are available for wheat, oats, and barley in the Prairie Provinces.

Note: Iron ore shipments and silver and gold production include Newfoundland as of April and as of May, 1949 respectively.

<sup>(1)</sup>Includes copper fine in ore, ingots, bars, billets, rods, strips, sheets and tubing.<sup>(2)</sup>Includes ingots, bars and billets.<sup>(3)</sup>Includes nickel in matte or speiss, oxide and fine.<sup>(4)</sup>IncludesNewfoundland as of May, 1949. <sup>(5)</sup>Includes lead in ore and in pigs.

\*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments universe for the industry from the Annual Census of Industry Survey.

<sup>(1)</sup>Total backlogs of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. The data are reported by 950 manufacturing plants which account for approximately 30% of total value of production in 1950. <sup>(2)</sup>Orders represent a two-month sales forecast, not total outstanding orders. <sup>(3)</sup>Excluding motor vehicles.

\*Not applicable to "Ratio" columns. \*\*Ratio of current month's orders to current month's shipments.

Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, and Quarterly Report on Estimated Value of Manufacturers Shipments. D.B.S.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1954, stands at 823, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.<sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.<sup>(3)</sup>Annual data are monthly averages of crop year.

<sup>(1)</sup>Monthly totals of 1953 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. <sup>(2)</sup>Does not include bait, offal, meal, livers, tongues or roe. <sup>(3)</sup>As of April, 1949, Newfoundland is included. <sup>(4)</sup>Data for Newfoundland are included as of January, 1954. Corresponding months of 1953 are revised to include Newfoundland as data for the current period become available.

<sup>(1)</sup>Beginning August, 1945, customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>(2)</sup>Includes Newfoundland. <sup>(3)</sup>Includes stocks held by manufacturers, wholesalers and other warehouses. <sup>(4)</sup>Eggs, dried and powdered.

<sup>(1)</sup>Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949.

<sup>(2)</sup>Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(3)</sup>Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(4)</sup>Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles.

<sup>(5)</sup>Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

Beginning with April, 1950, Newfoundland is included.

<sup>(1)</sup>In the upper section of this table, the annual statistics prior to 1953 embrace all steam railways, while monthly averages for 1953 and monthly data refer to railways with annual operating revenues of \$500,000 or over.<sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

Note.—Various categories of assets and liabilities have been re-arranged to conform with the classification now used in the Bank of Canada Statistical Summary.

<sup>(1)</sup>Foreign exchange and foreign securities.

<sup>(2)</sup>Industrial Development Bank capital stock, bonds and debentures.

<sup>(3)</sup>Bank premises and all other assets.

<sup>(4)</sup>Capital, rest fund and all other liabilities.

Note.—The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for the end of July, 1954, are on the new basis and, except for "Other Loans in Canada" adjustments have been made by the Bank of Canada to put figures for earlier dates on a comparable basis.

<sup>(1)</sup>Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit. <sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent. <sup>(4)</sup>Mainly deposits of foreign banks. <sup>(5)</sup>Including issues payable in foreign currency.

<sup>(6)</sup>Excluding Canadian day-to-day loans. <sup>(7)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit and are not strictly comparable with those for earlier dates. The figure for June 30, 1954, after adjustment for items in transit, was 3,789. Source: Statistical Summary of Bank of Canada.

## Private and Public Investment in Canada—Outlook 1955

The 1955 capital expenditure intentions of business, institutions and governments, and of individuals for housing involve an expected outlay of \$5.8 billion. If this programme is realized it will mean that capital expenditures in 1955 will be nearly 6 per cent greater than the 1954 level, and only slightly below the peak outlays of 1953. With little change in prices anticipated for the current year, the increase in the volume of capital spending should approximate that shown for value.

This anticipated increase in capital outlays in 1955 follows upon a decline in total investment outlays between 1953 and 1954. Information now available indicates that capital expenditures in 1954 amounted to \$5.5 billion, lower by nearly 6 per cent than in 1953. This decline occurred principally in expenditures for

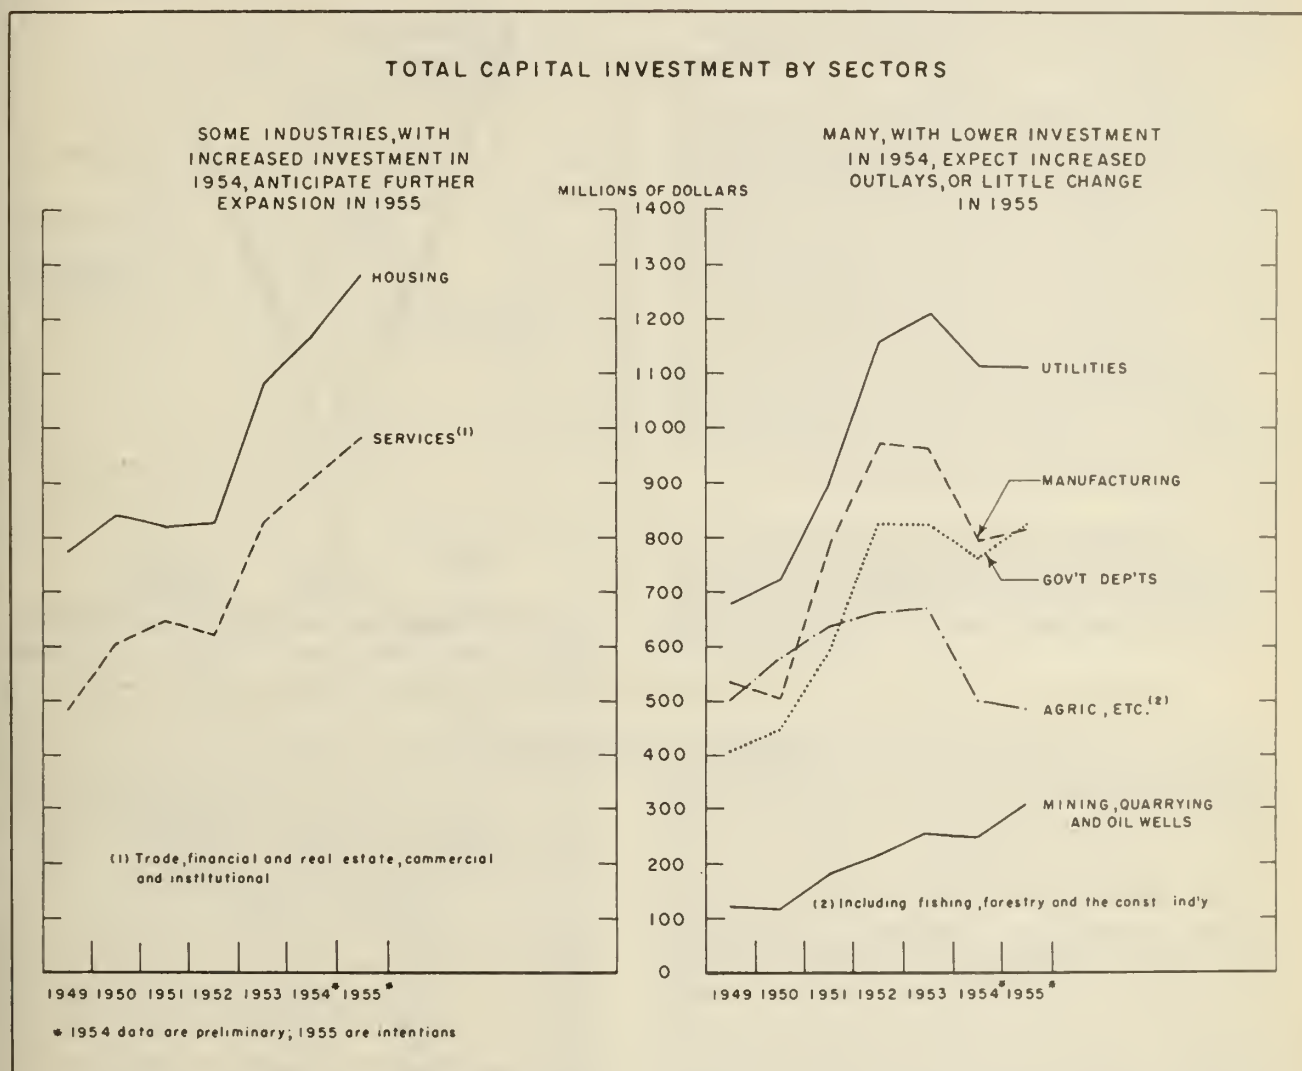

new machinery and equipment, with new non-residential construction also slightly lower than in 1953. This reduction in non-residential building, however, was more than offset by the substantial advance in new housing.

It may be noted that the realized level of public and private investment in 1954 was also approximately 6 per cent lower than the original intentions expressed early in that year. This short-fall reflected several adverse developments during the year, including lower farm income and unfavourable building weather. It is expected that there will be a larger carry-over of projects into 1955 than took place last year. Lower actual costs, as contrasted to planned costs, were also given as a reason for lower expenditures than were forecast at the beginning of the year, in some cases.

Intentions for 1955 indicate greater strength in the construction sector than was evident in the previous year, as both residential and non-residential building are expected to surpass the levels of 1954. This would raise construction activity to the highest level on record. However, a further decline is anticipated in expenditure for machinery and equipment which will partly

offset the advance in the construction sector. It is noteworthy that the decline in machinery and equipment outlays anticipated for 1955 is of much smaller magnitude than that which took place between 1953 and 1954; most of this anticipated 1955 reduction in machinery and equipment is for rolling stock by the principal railroads.

## The Programme by Sectors

The shift in the composition of the investment programme toward more construction activity reflects in large part the continued growth of the housing sector, although industrial and engineering construction is also expected to be higher in 1955. The expansion of these latter two groups is associated with more intensive mineral development, including crude petroleum,

and the beginning of full scale activity on the St. Lawrence seaway and related power projects. The strength of certain other service industries also is reflected in the higher construction activity; institutional building (such as hospitals and schools) represents an important part of this larger building programme.

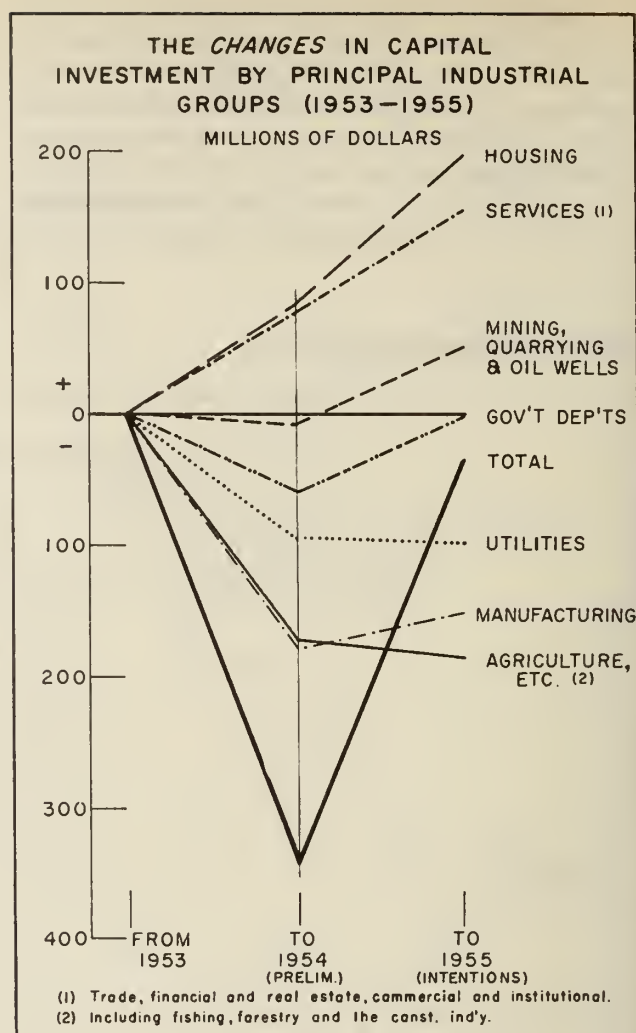

Other marked changes are evident in the investment intentions for the year 1955, and these are indicated in the accompanying charts and table. Many sectors which had experienced declines in 1954 expect to increase their outlays in 1955. Significant among these are mining, certain heavy<sup>1</sup> manufacturing industries and government departments. It may be noted that most of these groups had experienced rapid expansion in capital outlays in 1951 and 1952 during the defence build-up, and in 1953 these high levels were generally maintained or exceeded. However, in 1954, sharp reductions were experienced in many of these industries.

In 1955, however, these sectors anticipate increases in investment expenditure. The agriculture and fishing group had experienced substantially lower investment in 1954 than in 1953, as unfavourable agricultural conditions curtailed purchases of farm machinery. In this sector, no further decline in capital expenditures is indicated in the current year.

The anticipated advances in the total of the investment programme for 1955, therefore, mark a change of the 1954 pattern, and indicate wide-spread increases for the current year.

1. Heavy manufacturing here includes the following industries: pulp and paper, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, non-metallic-mineral products, products of petroleum and coal, and chemical products.

## CAPITAL EXPENDITURES

2. Includes: Trade, Financial, Insurance and Real Estate, Commercial and Institutional Services.

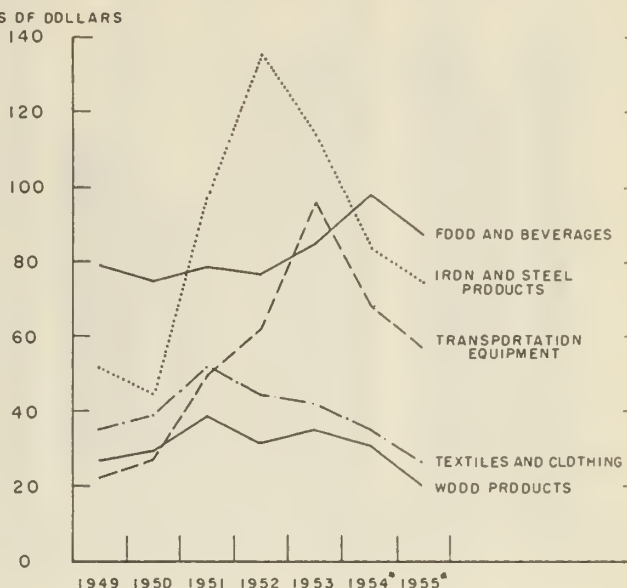

## Manufacturing Capital

### CAPITAL INVESTMENT IN SELECTED MANUFACTURING INDUSTRIES

#### INDUSTRIES ANTICIPATING HIGHER CAPITAL OUTLAYS IN 1955

#### INDUSTRIES ANTICIPATING LOWER CAPITAL OUTLAYS IN 1955

\*1954 data are preliminary; 1955 are intentions.

Manufacturing capital investment is expected to be nearly 3 per cent higher in 1955 than it was in 1954, largely the result of sharp advances in the pulp and paper, chemical and non-ferrous metal industries, with the largest advance in the pulp and paper industry. The chemical and non-ferrous metal industries, by the end of 1953 had completed large expansion projects associated with the Korean hostilities and subsequently experienced sharply reduced investment outlays in 1954. However, in 1955 they expect to carry out a larger capital programme than in the preceding year.

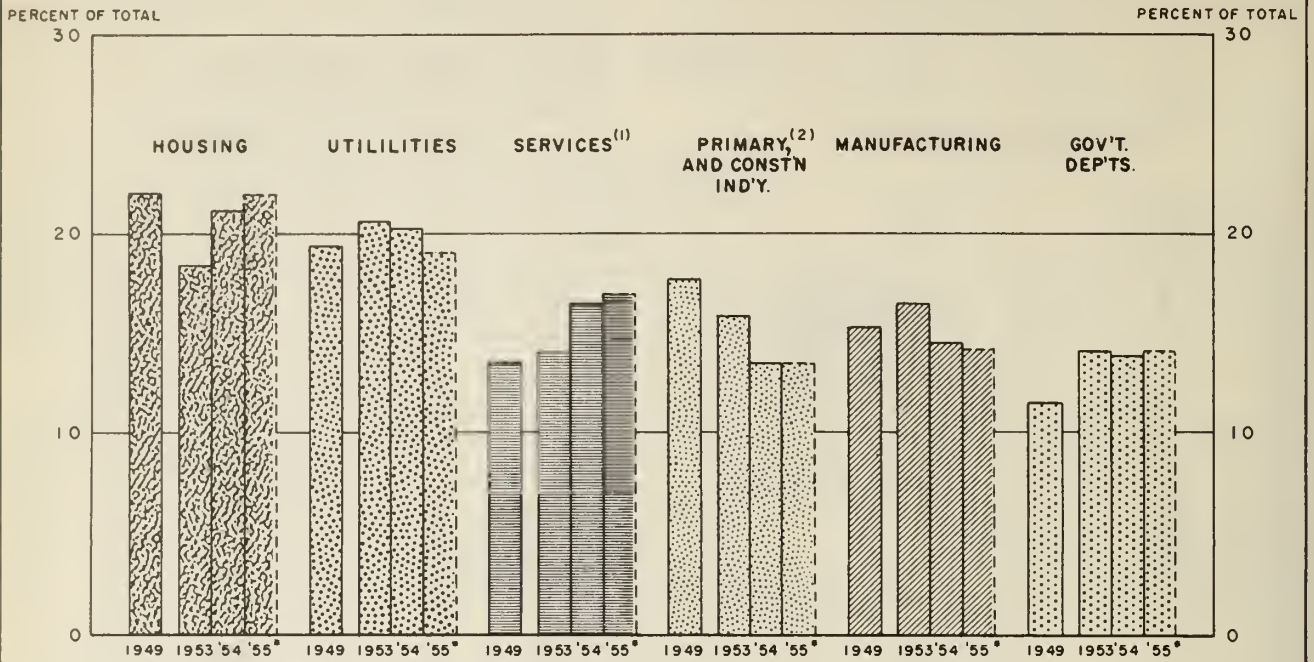

A number of manufacturing industries expect lower expenditures for plant, machinery and equipment in 1955 (see accompanying chart). The reduction in the food and beverage group contrasts with a substantial increase in capital outlays between 1953 and 1954. For clothing and textiles, wood products, iron and steel products and transportation equipment, the declines represent a further curtailment from the high programmes of 1953 or preceding years.

#### Other Sectors:

The investment plans of governments indicate that all three levels (federal, provincial and municipal) anticipate higher outlays in 1955 than took place in 1954. At the provincial and municipal levels the expected increases would result in expenditures being well above those of 1953; for the federal government, the programme calls for an increase of about 14 per cent from the 1954 level.

Outlays for schools and hospitals continue to expand with the growing population. Investment by real estate firms is also expected to advance further as new shopping centres are built for residential areas. The trade group also anticipates a further slight increase in new investment after the substantial expansion of the previous year; independent stores and the automotive trade expect the largest programmes of expansion in this group.

# DISTRIBUTION OF CAPITAL INVESTMENT BY SELECTED INDUSTRIES

\* Based on preliminary 1954 data; Intentions for 1955

(1) Services include: Trade, finance, real estate, commercial and institutional.

(2) Primary include: Agriculture, fishing, forestry, mining, quarrying and oil wells.

Note.—Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

<sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and no seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949. Annual data for 1952 are quarterly averages. Source: Labour Force Bulletin, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39 = 100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices except for wheat for which initial prices plus a ten-cent interim payment are used. Since August 1954, only initial prices are available for wheat, oats, and barley in the Prairie Provinces.

NOTE: Series revised to incorporate final December, 1953 values from the year-end inventory survey. For further details see December, 1954 report.

<sup>(1)</sup>As at end of period.

<sup>(2)</sup>Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by

gross payments. <sup>(3)</sup>Inventories include manufacturers' own investment only.

<sup>(4)</sup>Includes primary iron and steel, iron castings, sheet metal products and

ve and wire products. <sup>(5)</sup>Includes heavy electrical machinery, office, household and store machinery and industrial machinery. <sup>(6)</sup>Excludes heavy electrical

achinery. Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

\*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments universe for the industry from the Annual Census of Industry Survey.

<sup>(1)</sup>Total backlogs of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. The data are reported by 950 manufacturing plants which account for approximately 30% of total value of production in 1950. <sup>(2)</sup>Orders represent a two-month sales forecast, not total outstanding orders. <sup>(3)</sup>Excluding motor vehicles.

\*Not applicable to "Ratio" columns. \*\*Ratio of current month's orders to current month's shipments.

Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, and Quarterly Report on Estimated Value of Manufacturers Shipments, D.B.S.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Mill shipments destined for export.

<sup>(1)</sup>As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys.

<sup>(2)</sup>Excluding producers' interchange.

<sup>(3)</sup>Since 1946 imports

include, in addition to all other shapes, wire and wire rope. Beginning January 1954, imports exclude castings, forgings, fittings and couplings.

<sup>(4)</sup>Monthly average.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1954, stands at 823, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits and a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

Annual data are monthly averages of crop year.

Beginning with April, 1950, Newfoundland is included.

<sup>(1)</sup>In the upper section of this table, the annual statistics prior to 1953 embrace all steam railways, while monthly averages for 1953 and monthly data refer to railways with annual operating revenues of \$500,000 or over.<sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and

rent, equipment and joint facilities. Source: Operating Revenues, Expenses and Statistics, Railways in Canada, D.B.S.

Note.—Various categories of assets and liabilities have been re-arranged to conform with the classification now used in the Bank of Canada Statistical Summary.  
 (1) Foreign exchange and foreign securities. (2) Industrial Development Bank capital stock, bonds and debentures. (3) Bank premises and all other assets.  
 (4) Capital, rest fund and all other liabilities.

Note.—The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for the end of July, 1954, are on the new basis except for "Other Loans in Canada" adjustments have been made by the Bank of Canada to put figures for earlier dates on a comparable basis.

<sup>(1)</sup>Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit. <sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

<sup>(4)</sup>Mainly deposits of foreign banks. <sup>(5)</sup>Including issues payable in foreign currency.

<sup>(6)</sup>Excluding Canadian day-to-day loans. <sup>(7)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit and are not strictly comparable with those for earlier dates. The figure for June 30, 1954, after adjustment for items in transit, was 3,789.

## Gross National Product and Expenditure in 1954

Canada's gross national product for the year 1954 as a whole was estimated at \$24.0 billion, about 2 per cent lower than in 1953. This decline in output was largely attributable to the poor grain crop of last fall. In the non-farm sector, production showed little change in total from the level of the year 1953. This relative stability in non-farm production, in the year-over-year comparisons, obscures significant changes in industrial activity within the years 1953 and 1954. Thus the contraction in industrial activity which began in the third quarter of 1953, was reversed in mid-1954, as gross national

product moved upward in the last half of the year, particularly in the final quarter. At year-end, gross national product seasonally adjusted was at a rate of \$24.4 billion approximately the same as the annual average rate for the year 1953. Non-farm output in the final quarter was estimated to be above the peak third quarter of 1953.

The approximate timing and magnitude of the changes in the non-farm output between 1953 and 1954 are illustrated in the accompanying charts and in the table below:

Seasonally Adjusted Annual Rates  
(rounded in billions of dollars)

	1953				1954			
	I	II	III	IV	I	II	III	IV
Gross National Product (excluding accrued net income of farm operators <sup>1</sup> )	22.5	22.8	23.0	22.8	22.6	22.7	22.9	23.3
Change (computed from unrounded data)	+0.3	+0.2	-0.2	-0.2	0	+0.2	+0.5	

1. It may be noted that these figures are only approximately representative of movements in the non-farm sector since they include a number of small and stable components of G.N.P. originating in agriculture e.g. wages, interest, rents and depreciation.

It is apparent that the decline in non-farm production during the period of the downturn was of modest proportions, and appears to have amounted to about 2 per cent. Although earnings from current production as measured by national income were lower in this period, the flow of income payments to persons was well maintained. This stability in personal income and the increase in personal expenditure on consumer goods and services constituted important underlying strength in the economy at a time when declines were taking place in many of the final demand categories, and when investment in inventories was taking place at sharply reduced rates.

### Changes in Industrial Activity

Before proceeding to a description of the major expenditure categories, it will be useful to review briefly the experience of the various industrial groups in 1954. The declines in the volume of non-farm output which occurred during the down-turn were concentrated mainly in the

durable goods manufacturing industries, including iron and steel products, transportation equipment, and electrical apparatus and supplies. The lower production of iron and steel products reflected mainly reduced output of primary iron and steel shapes, machinery, agricultural implements, and heating and cooking apparatus. Declines in the transportation equipment industry were widespread; motor vehicle production, for example, was lower by 28 per cent in 1954 than in 1953. The electrical apparatus and supplies industry experienced lower activity principally as a result of reduced output of certain major appliances and heavy electrical machinery. Production of television sets, however, showed marked gains and the value of shipments of radios and television sets together was greater by nearly 26 per cent in 1954 than in the preceding year.

Output in non-durable goods manufacturing also showed a small decline during the period in which the contraction was under way, reflecting mainly the drop in clothing and textile production.

In the last half of 1954, the production of durable goods was showing greater strength. However, for the year as a whole, durable goods manufacturing output was down by 8 per cent. Production of non-durable manufacturing goods was also showing a firmer tone in the latter part of 1954, and clothing and textile production was somewhat stronger; for the year 1954, non-durable production was about 1 per cent lower than in 1953. Taking manufacturing as a whole, both durable and non-durable goods, the decline in the volume of output from 1953 to 1954 amounted to about 4 per cent.

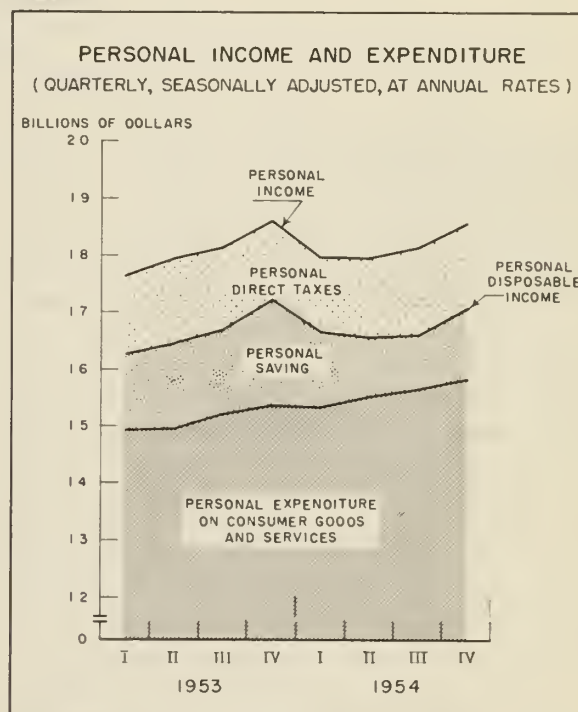

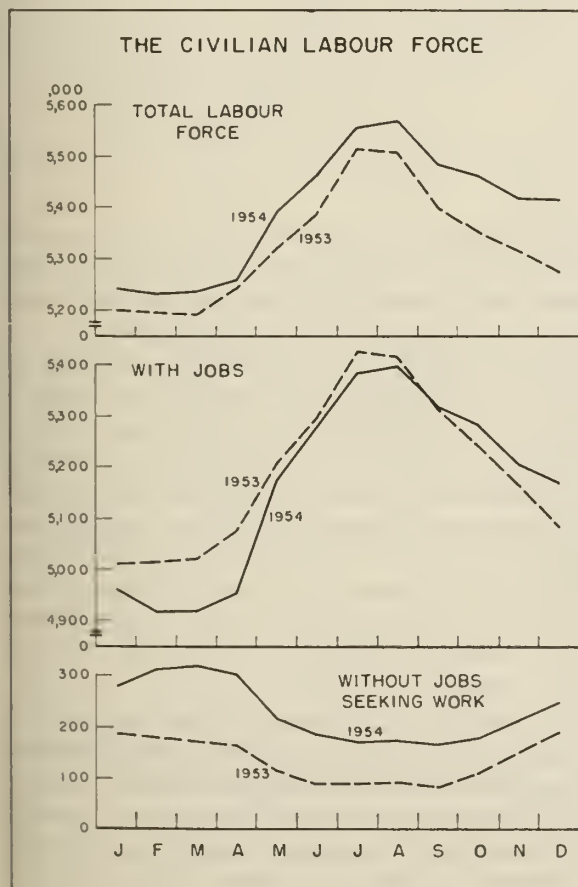

Outside the manufacturing field, production gains were widespread in 1954. All of the primary industries except agriculture showed substantial increases. The decline in agricultural production, as indicated above, was attributable to the lower Prairie grain crop; many other elements of farm production showed further gains in 1954. Production in mining, quarrying and oil wells was up by 13 per cent; mining of metals, fuels and non-metals showed gains of 9, 13 and 2 per cent, respectively. In the public

utilities group, gains were also recorded, with output of electrical power up by 5 per cent and sales of natural gas up by 25 per cent. In the fishing industry, the volume of landings of sea fish was 10 per cent higher than in the previous year. Forestry also showed a gain in output over 1953.

Production in most of the service industries moved upward in 1954. However, in transportation, storage and communication a decline was recorded, associated with lower shipments of grain, iron ore and heavy manufactured goods; ton-miles of revenue freight carried were down by 12 per cent from 1953. In construction, a small increase in output was shown over the previous year.

These production gains in the primary industries (except agriculture) and in the services group approximately counter-balanced the declines in manufacturing, and in transportation, storage and communication so that; for the year as a whole, little change occurred in total non-farm output.

### Summary of Employment and Income Developments

Accompanying developments on the production side in 1954, persons with jobs in the non-farm sector of the economy declined by about 1 per cent. Along with some growth in the labour

force, this led to an increase in persons without jobs and seeking work; the latter averaged 231,000 and amounted to 4.3 per cent of the labour force for 1954 as a whole, compared with about 2.5 per cent for 1953. The drop in manufacturing employment between 1953 and 1954 amounted to 5 per cent. The average number of hours worked per week in manufacturing also fell between 1953 and 1954, by 1.7 per cent.

In spite of the overall decline in non-farm employment of 1 per cent in 1954, labour income continued to rise throughout the year. Higher average hourly rates more than offset declines in total employment and in average hours worked, so that for the year as a whole, wages and salaries were 2 per cent above the level of 1953. Gains also occurred in other elements of personal income in 1954, and these contributed to the maintenance of a high level of purchas-

ing power in the personal sector of the economy. As a result, despite the sharp drop in net income of farm operators, total personal income showed little change in 1954 from the level of the preceding year. Personal income after taxes, other than net income of farm operators, in fact, was about 4 per cent higher in 1954 than in 1953.

With stability in income and an upward trend in personal expenditure on consumer goods and services throughout the year, the proportion of income saved declined somewhat; the ratio of saving to personal disposable income, however, remained higher than in 1947 and 1950, both years in which marked contractions in savings took place. In 1954, the lower saving ratio would appear to be partly associated with the sharp drop in Prairie farm income. Liquid asset holdings by the public continued at a high level throughout the year.

## Gross National Expenditure

Gross National Expenditure, 1953-1954.

(Note: Columns 4 and 5 are at seasonally adjusted annual rates. Figures will not add by + .1 or - .1 due to rounding).

Total final purchases of goods and services, apart from inventory investment, showed very little change in 1954 from the level of the previous year. This development reflects mainly the continued rise in consumer expenditures throughout 1954, and also, in part,

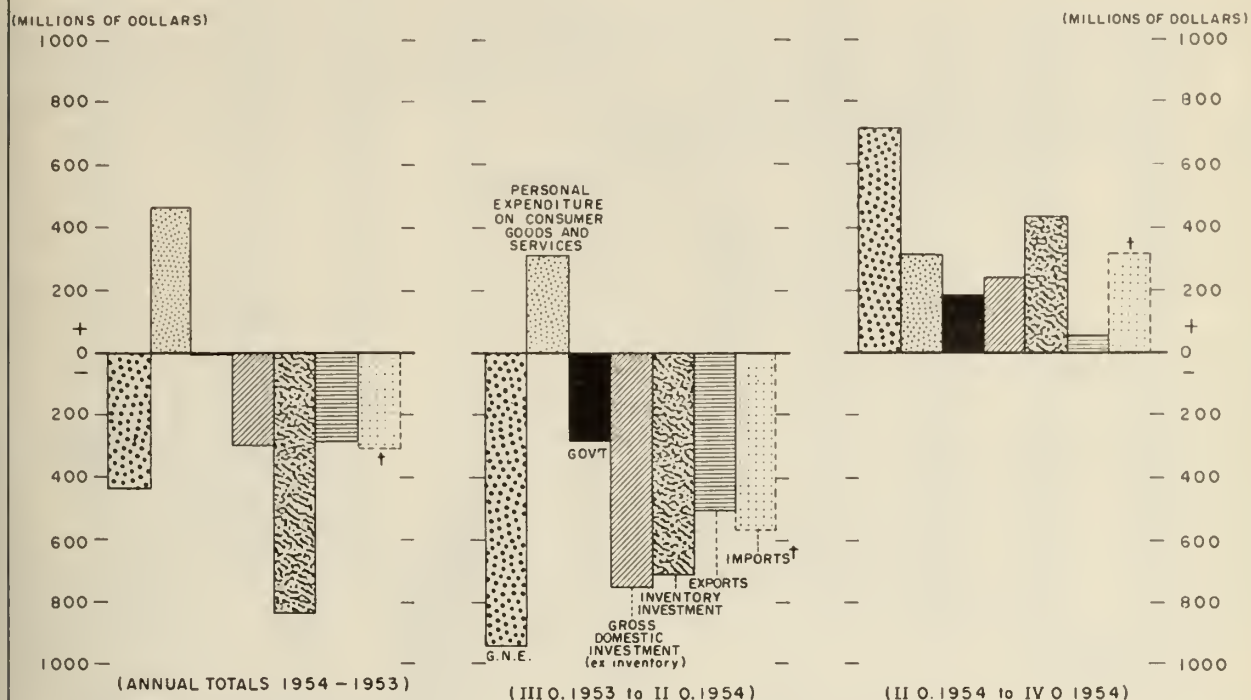

the increase in outlays for new housing; the combined increase in housing and consumer expenditure largely offset the declines in business investment in durable assets (primarily in machinery and equipment) and in exports. The substantial business inventory build-up of 1953

## CHANGES IN COMPONENTS OF GROSS NATIONAL EXPENDITURES

MOST COMPONENTS OF G.N.E.  
WERE LOWER IN 1954  
WITH PERSONAL EXPENDITURE  
PROVIDING THE MAIN SOURCE  
OF STRENGTH

THE DECLINES WERE CONCENTRATED  
MAINLY BETWEEN THE III Q. 1953  
AND II Q. 1954\*

IN THE LAST HALF OF THE YEAR  
MOST MAJOR EXPENDITURE COMPONENTS  
WERE RISING AGAIN\*

\* Seasonally adjusted, at annual rates

† Imports are a negative entry in G.N.E.

was reversed in 1954 and a considerable liquidation of inventories took place, with the turn-around amounting to \$0.5 billion. This shift in the inventory sector from a position of net accumulation to one of net liquidation occurred chiefly at the manufacturing level, and was mainly concentrated in those areas where declines in production were most pronounced, namely iron and steel products, transportation equipment, electrical apparatus and supplies, and clothing and textiles. At the same time, farm and grain inventories were reduced in 1954 in contrast to some accumulation in the preceding year. The net effect of these various changes on total Canadian production was partly offset by a decline in imports of foreign-produced goods and services, so that on balance, Canadian output declined by only \$0.4 billion. It may be noted that the fall-off in imports was also concentrated largely in those industries where production and inventory declines occurred.

Turning to developments within the years 1953 and 1954, business inventory movements were a factor of major significance in the downturn which occurred between the third quarter of 1953 and the second quarter of 1954. The extent of the inventory turn-around amounted to the equivalent of \$0.6 billion of new production. However, other demand categories were also weakening during this same period, with final purchases of goods and services (excluding inventory investment) declining by \$1.3 billion. Thus, the drop in the flow of spending amounted in total to close to \$2.0 billion at annual rates. A large part of this decline in demand was matched by a cut-back in imports of foreign-produced goods and services, which fell by \$0.6 billion; thus, to this extent, the impact of declining demand on Canadian production was partly neutralized.

The pattern of the recovery from the middle of 1954 to the end of the year is also illustrated in the chart on page (v). With the exception of machinery and equipment outlays, all of the final expenditure categories which had previously been showing declines were picking

up in the last half of the year. At the same time, the business inventory liquidation which had been very substantial in the second and third quarters was no longer in evidence at year end; if allowance is made for seasonal factors, some net accumulation appears to have occurred in the fourth quarter.

<sup>(1)</sup>For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. <sup>(2)</sup>Data exclude persons in remote parts of several provinces and Indians on Reservations. Newfoundland included as of March, 1950. <sup>(3)</sup>For purposes of this comparison, persons without jobs and seeking work have been added to the total of paid workers with jobs. <sup>(4)</sup>Includes only those not at work and seeking work. <sup>(5)</sup>Includes supplementary benefit claimants from December to March. Newfoundland included as of April, 1949. <sup>(6)</sup>Conversions are included with annual data only. <sup>(7)</sup>Annual figures are survey averages.

4 Note.—Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

8 <sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949. Annual data for 1952 are quarterly averages. Source: Labour Force Bulletin, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39 = 100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices except for wheat for which initial prices plus a ten-cent interim payment are used. Since August 1954, only initial prices are available for wheat, oats, and barley in the Prairie Provinces.

Notes: Series revised to incorporate final December, 1953 values from the year-end inventory survey. For further details see December, 1954 report.

<sup>(1)</sup>As at end of period.

<sup>(2)</sup>Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by

prepayments.

<sup>(3)</sup>Inventories include manufacturers' own investment only.

<sup>(4)</sup>Includes primary iron and steel, iron castings, sheet metal products and

wire and wire products.

<sup>(5)</sup>Includes heavy electrical machinery, office, household and store machinery and industrial machinery.

<sup>(6)</sup>Excludes heavy electrical

machinery.

\*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments universe for the industry from the Annual Census of Industry Survey.

Note.—The series on Unfilled Orders has been revised and a series on New Orders added.

<sup>(1)</sup>Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated total values for each industry at the end of December, 1953. The latter were obtained from a survey of manufacturing firms with a production value over \$50,000.<sup>(2)</sup>Total New Orders received during the period, at estimated selling values. The series covers total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Mill shipments destined for export.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1955, stands at 821, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits to a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. Annual data are monthly averages of crop year.

<sup>(1)</sup>Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949.

<sup>(2)</sup>Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(3)</sup>Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(4)</sup>Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles.

<sup>(5)</sup>Includes estimated personal loans from chartered banks, small loan companies, licensed money lenders and credit unions.

Beginning with April, 1950, Newfoundland is included.

<sup>(1)</sup>In the upper section of this table, the annual statistics prior to 1953 embrace all steam railways, while monthly averages for 1953 and monthly data refer to railways with annual operating revenues of \$500,000 or over.<sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and

of equipment and joint facilities.

Note.—The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for the end of July, 1954, are on the new basis except for "Other Loans in Canada" adjustments have been made by the Bank of Canada to put figures for earlier dates on a comparable basis.

<sup>(1)</sup>Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit.

<sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

<sup>(4)</sup>Mainly deposits of foreign banks.

<sup>(5)</sup>Including issues payable in foreign currency.

<sup>(6)</sup>Excluding Canadian day-to-day loans. <sup>(7)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit and are not strictly comparable with those for earlier dates. The figure for June 30, 1954, after adjustment for items in transit, was 3,789.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and union bonds without insurance. Totals are estimates projected from the sales reported by 29 companies operating in Canada representing 90 per cent of new ordinary insurance sales. Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

(2) Includes, in addition to the industries listed, Tobacco.

Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

(3) Includes Printing and Publishing and Allied Industries.

Source: Quarterly Corporation Profits, D.B.S.

(4) For 1953 and 1954, these totals do not equal the sum of the totals for the individual groups. It is estimated that total profits before taxes may exceed the sum of the groups by about \$11,000,000 per quarter in 1953 and \$14,000,000 per quarter in 1954. Although the totals have been adjusted by these amounts it is not possible to present to allocate the differences to the individual groups.

\*Assignments made under the Bankruptcy and Winding-Up Acts. <sup>(1)</sup>Quarterly data for the last five columns are monthly averages. <sup>(2)</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Since July, 1950, agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.

<sup>(1)</sup>For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively.

<sup>(2)</sup>Data exclude Indians

<sup>(3)</sup>Reservations. Newfoundland included as of March, 1950.

<sup>(4)</sup>For purposes of this comparison, persons without jobs and seeking work have been added to

<sup>(5)</sup>total of paid workers with jobs.

<sup>(6)</sup>Includes only those not at work and seeking work.

<sup>(7)</sup>Includes supplementary benefit claimants from December to

March Newfoundland included as of April, 1949.

<sup>(8)</sup>Conversions are included with annual data only.

<sup>(9)</sup>Annual figures are survey averages.

4 Note.— Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. D for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

<sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

12 Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949. Annual data for 1952 are quarterly averages. The series are revised to include estimates relating to certain remote areas not covered in previous surveys. Source: Labour Force Bulletin, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39=100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices except for wheat for which initial prices plus a ten-cent interim payment are used. Since August 1954, only initial prices are available for wheat, oats, and barley in the Prairie Provinces.

NOTE: Series revised to incorporate final December, 1953 values from the year-end inventory survey. For further details see December, 1954 report.  
<sup>(1)</sup>As at end of period. <sup>(2)</sup>Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by progress payments. <sup>(3)</sup>Inventories include manufacturers' own investment only. <sup>(4)</sup>Includes primary iron and steel, iron castings, sheet metal products and wire and wire products. <sup>(5)</sup>Includes heavy electrical machinery, office, household and store machinery and industrial machinery. <sup>(6)</sup>Excludes heavy electrical machinery.

34 \*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments for the industry from the Annual Census of Industry Survey.

Note.—The series on Unfilled Orders has been revised and a series on New Orders added.

<sup>(1)</sup>Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated total values for each industry at the end of December, 1953. The latter were obtained from a survey of manufacturing firms with a production value over \$50,000.

The sample of firms reporting monthly accounted for 75% of the total estimated Unfilled Orders Value in December, 1953. <sup>(2)</sup>Total New Orders received during the period, at estimated selling values. The series covers total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Mill shipments destined for export.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1955, stands at 823, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

<sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>(3)</sup>Annual data are monthly averages of crop year.

<sup>(1)</sup>Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949. <sup>(2)</sup>Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(3)</sup>Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland. <sup>(4)</sup>Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles. <sup>(5)</sup>Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

Beginning with April, 1950, Newfoundland is included.

<sup>(1)</sup>In the upper section of this table, the annual statistics prior to 1954 embrace all steam railways, while monthly averages for 1954 and monthly data refer to railways with annual operating revenues of \$500,000 or over. <sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and cost of equipment and joint facilities.

Note.—The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for the end of July, 1951, are on the new basis and, except for "Other Loans in Canada" adjustments have been made by the Bank of Canada to put figures for earlier dates on a comparable basis.

<sup>(1)</sup>Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit.

<sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

<sup>(4)</sup>Mainly deposits of foreign banks.

<sup>(5)</sup>Including issues payable in foreign currency.

<sup>(6)</sup>Excluding Canadian day-to-day loans. <sup>(7)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit and are not strictly comparable to those for earlier dates. The figure for June 30, 1954, after adjustment for items in transit, was 3,789.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and bonds without insurance. Totals are estimates projected from the sales reported by 29 companies operating in Canada representing 90 per cent of new ordinary insurance sales. \*Monthly data for 1955 are not strictly comparable with those of 1954 due to several company changes in the manner of reporting new business. On a comparable basis, the Canada total in January, 1955 was 18% above that of January, 1954. Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada excluding government-owned companies and incorporated co-operatives).

(1) Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

(2) Includes, in addition to the industries listed, Tobacco.

(3) Includes Printing and Publishing and Allied Industries.

Source: Quarterly Corporation Profits, D.B.S.

(4) For 1953 and 1954, these totals do not equal the sum of the totals for the individual groups. It is estimated that total profits before taxes may exceed the sum of the groups by about \$11,000,000 per quarter in 1953 and \$14,000,000 per quarter in 1954. Although the totals have been adjusted by these amounts it is not possible to present to allocate the differences to the individual groups.

# Current Economic Conditions

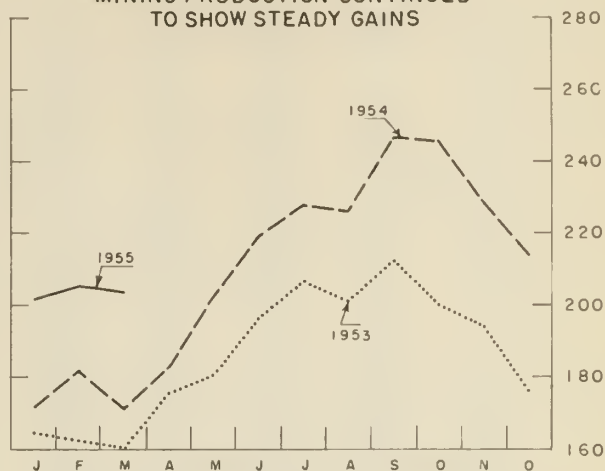

## INDUSTRIAL PRODUCTION\*

(1935 - 39 = 100)

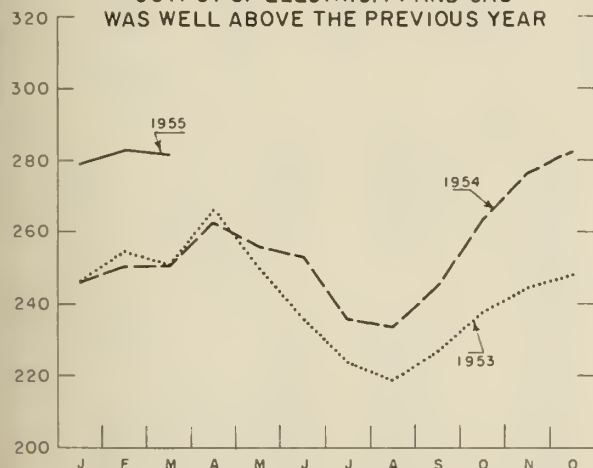

FIRST QUARTER INDUSTRIAL PRODUCTION WAS HIGHER IN 1955 THAN IN 1953 OR 1954

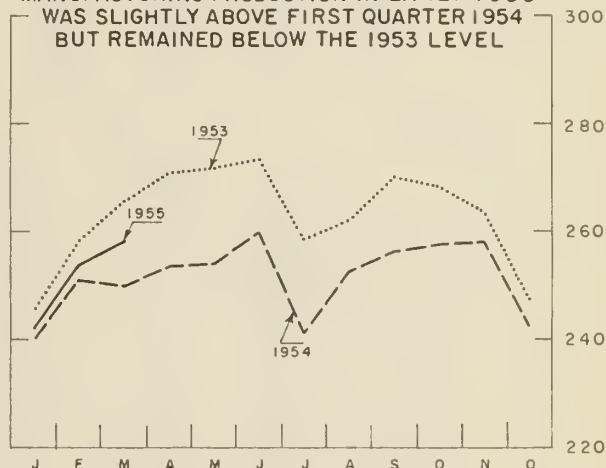

MINING PRODUCTION CONTINUED TO SHOW STEADY GAINS

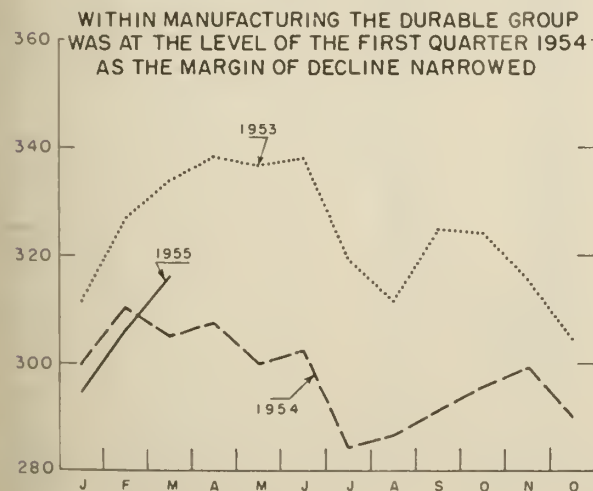

OUTPUT OF ELECTRICITY AND GAS WAS WELL ABOVE THE PREVIOUS YEAR

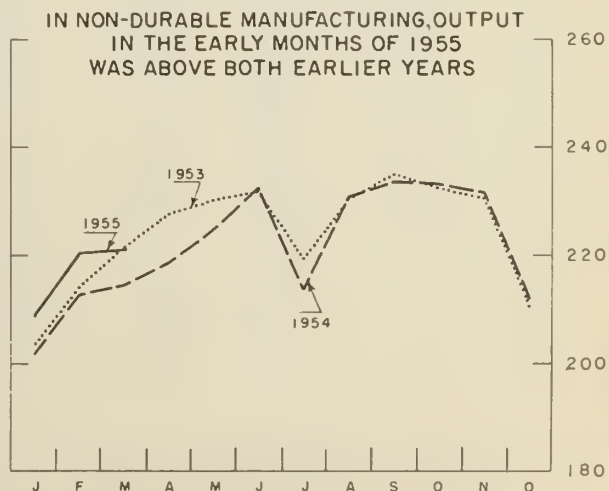

MANUFACTURING PRODUCTION IN EARLY 1955 WAS SLIGHTLY ABOVE FIRST QUARTER 1954 BUT REMAINED BELOW THE 1953 LEVEL

WITHIN MANUFACTURING THE DURABLE GROUP WAS AT THE LEVEL OF THE FIRST QUARTER 1954 AS THE MARGIN OF DECLINE NARROWED

IN NON-DURABLE MANUFACTURING, OUTPUT IN THE EARLY MONTHS OF 1955 WAS ABOVE BOTH EARLIER YEARS

\* BASED ON DATA AS IN TABLE 6, p. 9f

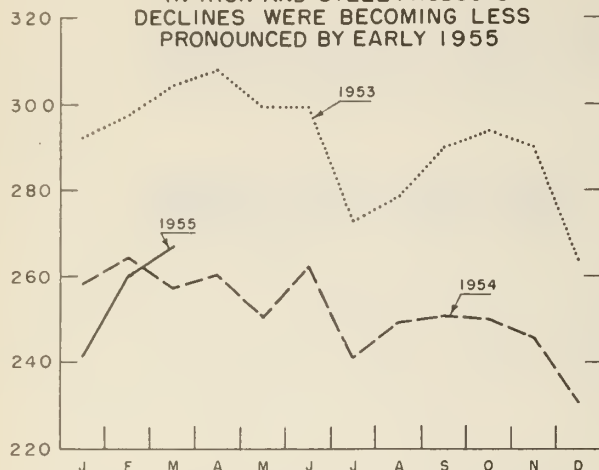

# MANUFACTURING PRODUCTION\*

(1935-39=100)

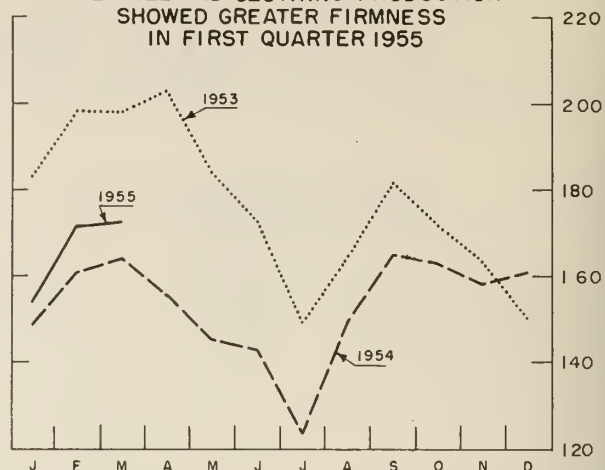

## DURABLE GOODS

IN IRON AND STEEL PRODUCTS  
DECLINES WERE BECOMING LESS  
PRONOUNCED BY EARLY 1955

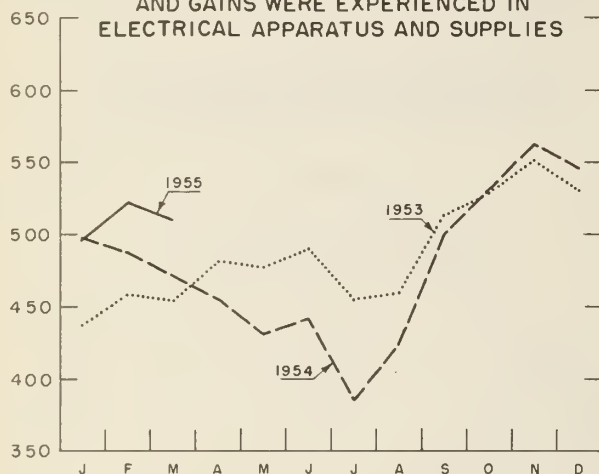

## NON-DURABLE GOODS

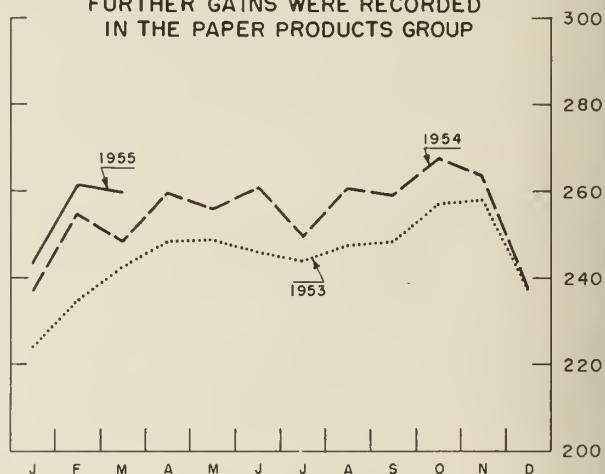

TEXTILE AND CLOTHING PRODUCTION  
SHOWED GREATER FIRMNESS  
IN FIRST QUARTER 1955

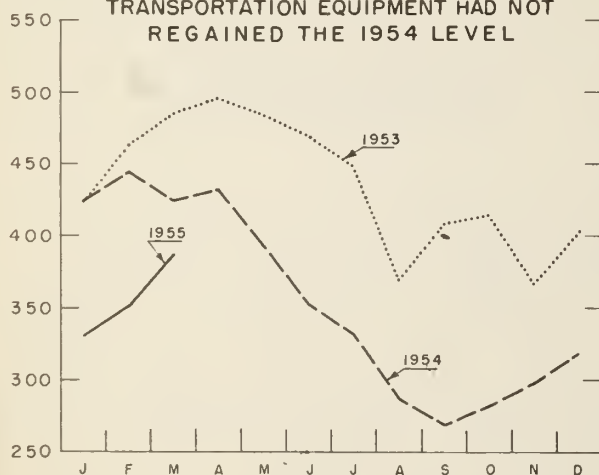

AND GAINS WERE EXPERIENCED IN  
ELECTRICAL APPARATUS AND SUPPLIES

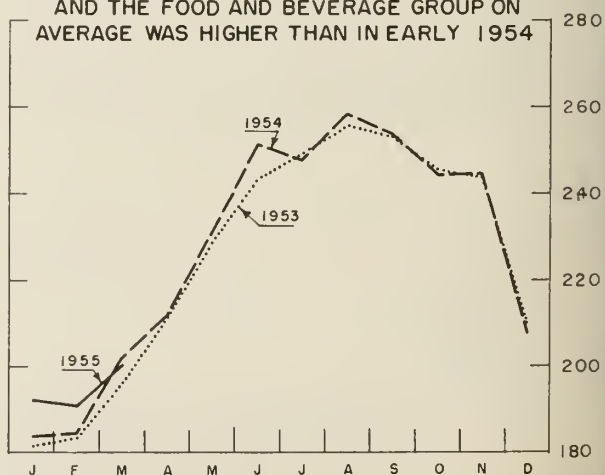

FURTHER GAINS WERE RECORDED  
IN THE PAPER PRODUCTS GROUP

TRANSPORTATION EQUIPMENT HAD NOT  
REGAINED THE 1954 LEVEL

AND THE FOOD AND BEVERAGE GROUP ON  
AVERAGE WAS HIGHER THAN IN EARLY 1954

\* BASED ON DATA AS IN TABLE 6, p. 9f

(1) For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. (2) Data exclude Indians and Reservations. Newfoundland included as of March, 1950. (3) For purposes of this comparison, persons without jobs and seeking work have been added to the total of paid workers with jobs. (4) Includes only those not at work and seeking work. (5) Includes supplementary benefit claimants from December to March. Newfoundland included as of April, 1949. (6) Conversions are included with annual data only. (7) Annual figures are survey averages.

Note.— Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup> Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup> Exclusive of stillbirths. <sup>(3)</sup> Not applicable to figures of population. <sup>(4)</sup> Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

<sup>(5)</sup> Monthly average.

<sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

12 Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949. Annual data for 1952 are quarterly averages. The series are revised to include estimates relating to certain remote areas not covered in previous surveys. Source: Labour Force Bulletin, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39=100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices except for wheat for which initial prices plus a ten-cent interim payment are used. Since August 1954, only initial prices are available for wheat, oats, and barley in the Prairie Provinces.

Note: Series revised to incorporate final December, 1953 values from the year-end inventory survey. For further details see December, 1954 report.

<sup>(1)</sup>As at end of period. <sup>(2)</sup>Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by progress payments. <sup>(3)</sup>Inventories include manufacturers' own investment only. <sup>(4)</sup>Includes primary iron and steel, iron castings, sheet metal products and wire and wire products. <sup>(5)</sup>Includes heavy electrical machinery, office, household and store machinery and industrial machinery. <sup>(6)</sup>Excludes heavy electrical machinery.

\*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments universe for the industry from the Annual Census of Industry Survey.

Note.—The series on Unfilled Orders has been revised and a series on New Orders added.

<sup>(1)</sup>Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated total values for each industry at the end of December, 1953. The latter were obtained from a survey of all manufacturing firms with a production value over \$50,000.<sup>(2)</sup>The sample of firms reporting monthly accounted for 75% of the total estimated Unfilled Orders Value in December, 1953. <sup>(3)</sup>Total New Orders received during the period, at estimated selling values. The series covers total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Mill shipments destined for export.

<sup>(1)</sup>As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys. <sup>(2)</sup>Excluding producers' interchange. <sup>(3)</sup>Since 1946 imports include, in addition to all other shapes, wire and wire rope. Beginning January 1954, imports exclude castings, forgings, fittings and couplings. <sup>(4)</sup>Monthly average. Source: Primary Iron and Steel, D.B.S.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1955, stands at 823, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949. <sup>(2)</sup>Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

<sup>(3)</sup>Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland. <sup>(4)</sup>Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles. <sup>(5)</sup>Includes estimated personal loans of chartered banks, small loan companies, licensed money lenders and credit unions.

Beginning with April, 1950, Newfoundland is included.

<sup>(1)</sup>In the upper section of this table, the annual statistics prior to 1954 embrace all steam railways, while monthly averages for 1954 and monthly data refer to ways with annual operating revenues of \$500,000 or over.<sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and

of equipment and joint facilities. Source: Operating Revenues, Expenses and Statistics, Railways in Canada, D.B.S.

Note.—The classification of chartered bank assets and liabilities was revised by the Bank Act of 1954. Figures for the end of July, 1954, are on the new basis and, except for "Other Loans in Canada" adjustments have been made by the Bank of Canada to put figures for earlier dates on a comparable basis.

<sup>(1)</sup>Prior to July, 1954, all figures in this section are daily averages. From July, 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

<sup>(2)</sup>From July, 1954, the figures are not adjusted for items in transit. <sup>(3)</sup>Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent. <sup>(4)</sup>Mainly deposits of foreign banks. <sup>(5)</sup>Including issues payable in foreign currency.

<sup>(6)</sup>Excluding Canadian day-to-day loans. <sup>(7)</sup>Figures for June 30, 1954, and later, are not adjusted for items in transit and are not strictly comparable with those for earlier dates. The figure for June 30, 1954, after adjustment for items in transit, was 3,789.

Note.—This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 29 companies operating in Canada representing 90 per cent of new ordinary insurance sales. \*Monthly data for 1955 are not strictly comparable with those of 1954 due to several company changes in the manner of reporting new business. On a comparable basis, the Canada total in March, 1955 was 16% above that of March, 1951. Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada excluding government-owned companies and incorporated co-operatives.

<sup>(1)</sup> Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

<sup>(2)</sup> Includes, in addition to the industries listed, Tobacco.

<sup>(3)</sup> Includes Printing and Publishing and Allied Industries.

<sup>(4)</sup> For 1953 and 1954, these totals do not equal the sum of the totals for the individual groups. It is estimated that total profits before taxes may exceed the sum of the groups by about \$11,000,000 per quarter in 1953 and \$14,000,000 per quarter in 1954. Although the totals have been adjusted by these amounts it is not possible to present to allocate the differences to the individual groups.

## SELECTED COMPONENTS OF INCOME AND EXPENDITURE

## *Gross National Product Rose Further in the First Quarter of this Year*

Canada's gross national product showed a further advance in the first quarter of 1955, as the upturn in business activity which began in the second half of last year continued. Seasonally adjusted at annual rates, the value of the nation's total production of goods and services amounted to \$25.0 billion in the first quarter, an increase of 3% over the fourth quarter of 1954 and 4% above the average of \$24.0 billion for the year 1954 as a whole. These gains over last year include an allowance for an estimated higher crop production in 1955 and are thus subject to partial qualification. About 1 percentage point of these increases, or \$200 million, is attributable to this factor.

In the non-farm sector of the economy the expansion in activity which began last year brought the level of non-farm production in the first quarter to a point about 2% above last year's peak fourth-quarter. Seasonally adjusted at annual rates, the increase in gross national product, excluding accrued net income of farm operators, amounted to about \$400 million. Related indicators suggest that, after allowing for seasonal factors, about one-half of the production gain occurred in manufacturing, with the major increases in transportation equipment, iron and steel products, and wood products. Non-durable manufacturing production also rose from the fourth to the first quarter, as major gains occurred in foods and beverages and in rubber products. Among the primary industries, mining and forestry output expanded further, while production in the service industries showed a continuation of previous gains.

The expansion of business activity from the fourth to the first quarter was accompanied by a build-up of business inventories and a sharp rise in merchandise exports, on the seasonally adjusted basis. Apart from these two expenditure categories, other major components of demand in the first quarter were relatively stable. Approximately half of the inventory build-up (seasonally adjusted) appears to have been in automobiles, production of which was a major factor in the upturn in manufacturing activity. The gains in merchandise exports in the first quarter were generally widespread and affected most of the major categories in the export group. In particular, exports of

agricultural products, iron and its products, non-ferrous metals and chemicals showed major gains from the fourth to the first quarter, after allowing for seasonal factors. This rise in export demand, as has been noted, was accompanied by gains in production in durable manufacturing, forestry and mining.

## *National Income and Gross National Product*

Wages, salaries and supplementary labour income, seasonally adjusted, amounted to \$12.3 billion in the first quarter of 1955, nearly 1% higher than in the last quarter of 1954. The largest increase from the fourth to the first quarter occurred in the manufacturing group. The remainder of the gain was almost entirely attributable to increases in the service industries. Taking labour income as a whole, the gains in the first quarter of 1955 brought total labour income to a point about 4.5% above the first quarter of the year 1954. Accompanying this increase over a year ago, paid workers with jobs were up by nearly 1.5%, and average weekly earnings in the main non-agricultural industries were up by approximately 3%.

Investment income, seasonally adjusted, rose moderately in the first quarter over the last quarter of 1954. Corporation profits before taxes, after having remained comparatively level throughout most of 1954, showed a moderate gain. The largest increases were in the mining and durable manufacturing groups.

Indirect taxes less subsidies, seasonally adjusted, showed a substantial gain in the first quarter of 1955 over the fourth quarter of last year, as federal excise tax collections and customs import duties rose sharply. These increases were related to higher production of durable goods, a moderate increase in consumer outlays for durables, a build-up of business inventories (especially automobiles), and a higher level of imports. Relative to the first quarter of 1954, indirect taxes less subsidies were higher by about 5%.

## *Gross National Expenditure*

Personal expenditure on consumer goods and services showed little change in total from the fourth to the first quarter (seasonally

adjusted), but was at an annual rate approximately 2% above the average for the year 1954 as a whole. Durable goods purchases, which had been declining throughout most of 1954, rose by 5% from the fourth to the first quarter, and were at a level only slightly below the first quarter of a year ago. The recent pick-up in durable goods sales was concentrated in automobiles, but purchases of major appliances (including television sets) were also higher in the first quarter.

Consumer outlays for non-durable goods dropped fractionally from the fourth to the first quarter, reflecting some decline in purchases of clothing and foot wear. Outlays for services, which have grown steadily in recent quarters, continued to move upward.

Government expenditure on goods and services was approximately unchanged from the fourth quarter of last year, at an annual rate of \$4.5 billion. This constitutes a gain of about 4% over the first quarter of 1954. In the year-over-year comparison, defence expenditures have remained level (on the national accounts basis), while federal non-defence expenditures and the total of provincial and municipal expenditures have increased.

Expenditure on new residential construction in the first quarter was at an annual rate of \$1.3 billion, unchanged from the high fourth-quarter level, and 11% above the 1954 annual average. Housing starts and completions were well above any previous first-quarter level. Investment in new non-residential construction showed little change from the fourth quarter of last year, and remained below the level of a year ago. Investment in new machinery and equipment showed a modest rise over the fourth quarter.

The build-up of business inventories was a major factor in the increase in output from the fourth to the first quarter. Seasonally adjusted at annual rates, the accumulation of business inventories in the first quarter amounted to

\$0.4 billion. During the second and third quarters of 1954, a substantial part of final demand was being met through the drawing down of existing inventory stocks, and this development tended to have a restraining effect upon production. The turn-around in business inventories from the third quarter of 1954 to the first quarter of 1955 has amounted to approximately \$0.8 billion (seasonally adjusted at annual rates), or somewhat more than 3% of gross national product.

The build-up of business inventories in the first quarter occurred almost wholly at the manufacturing and retail trade levels, with small additions in wholesale trade. The major item in the total build-up was automobile inventories, which accounted for a large share of the accumulation at both the manufacturing and retail trade levels.

Substantial increases were experienced in both exports and imports of goods and services in the first quarter of 1955. Seasonally adjusted at annual rates, exports rose by 8% over the fourth quarter, while imports showed a gain of 4%.

The gains in exports over the fourth quarter were widespread in the goods group, but little change occurred in services. Sharp increases occurred in exports of wood products, as well as in the major base metals; in the latter case both volume and price gains were contributing factors. It was previously noted that activity in forestry, mining and manufactured wood products was rising in the first quarter of this year. Exports of chemicals were also up significantly.

On the import side, iron and its products was the only commodity group to show any significant change from the fourth to first quarter. This appears to be related to the increase in automobile production and to the improvement in investment in machinery and equipment. Freight and shipping payments increased in response to the higher volume of imports. Interest and dividend payments also rose sharply.

<sup>(1)</sup>For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. <sup>(2)</sup>Data exclude Indians on Reservations. Newfoundland included as of March, 1950. <sup>(3)</sup>For purposes of this comparison, persons without jobs and seeking work have been added to the total of paid workers with jobs. <sup>(4)</sup>Includes only those not at work and seeking work. <sup>(5)</sup>Includes supplementary benefit claimants from December to March. Newfoundland included as of April, 1949. <sup>(6)</sup>Conversions are included with annual data only. <sup>(7)</sup>Annual figures are survey averages.

Note.— Until the end of 1953, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1953 have been revised accordingly. Monthly figures for 1954 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

<sup>(5)</sup>Monthly average.

<sup>(1)</sup>Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given the seasonally adjusted figures for this item.

<sup>(2)</sup>This item differs from column 4, top of page 7, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board. Source: Quarterly Reports; National Accounts, Income and Expenditure, D.B.S.

<sup>(1)</sup>Excludes gold. <sup>(2)</sup>Arithmetically converted from 1935-39=100. <sup>(3)</sup>Excluding Newfoundland. The prices of western grains prior to August, 1954, are final prices whereas those used since are initial prices for wheat and initial prices plus interim payments for oats and barley. \*Estimates based on values of monthly sales, or shipments, as reported by a sample of manufacturing establishments. In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The trend established for each industry is applied to the gross value of shipments universe for the industry from the Annual Census of Industry Survey.

<sup>(1)</sup> Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimates are derived by inflating the monthly reported values to total for each industry on the basis of the estimated total values for each industry at the end of December, 1953. The latter were obtained from a survey of all manufacturing firms with a production value over \$50,000.

The sample of firms reporting monthly accounted for 75% of the total estimated Unfilled Orders Value in December, 1953. <sup>(2)</sup> Total New Orders received during the period, at estimated selling values. The series covers total New Orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.\*Monthly and annual data revised according to more recent bench-marks.

<sup>(1)</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected. <sup>(2)</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>(3)</sup>Mill shipments destined for export.

\*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, and as of 1955, stands at 823, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup>As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.<sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.<sup>(3)</sup>Annual data are monthly averages of crop year.

50 <sup>(1)</sup>Beginning August, 1945, customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>(2)</sup>Includes Newfoundland. <sup>(3)</sup>Includes stocks held by manufacturers, wholesalers and other warehouses. <sup>(4)</sup>Eggs, dried and powder
